

Kidney Disease: Controlling your Potassium and Phosphate with Diabetes

This dietary advice sheet provides general information to help you change your diet. If you want more detailed advice or are following other dietary restrictions and need guidance, please ask your doctor to refer you to a registered dietitian.

Potassium and phosphate are minerals found naturally in foods and are present in the blood. In kidney disease, the amounts of potassium and phosphate in your blood can rise. This can be harmful to your health. The following advice will help you to choose lower potassium and phosphate foods while still following a varied, enjoyable diet that is suitable for your diabetes. If you need more detailed advice please contact a dietitian.

Foods to limit	Foods to choose
<p>Dairy Products: Condensed and evaporated milks Processed cheese spread e.g. Dairylea, Primula, supermarket own brand cheese spreads Cheese containing nuts, Emmental, Gruyere, Parmesan, Cheddar, reduced-fat Cheddar, Edam, Gouda, Red Leicester</p>	<p>Eggs, up to 4 per week; milk, 200ml (1/3 pint) per day; Yoghurts/fromage frais, 120g-150g pot 3-4 per week (containing less than 10g carbohydrate per 100g); Ice cream, 2 scoops (120g) 2-3 per week; Custard, 150ml (1/4 pint) or Milk pudding, 200g (1/2 tin) 2-3 per week Cheese: maximum 180g (6oz) per week (Brie, Camembert, cottage cheese, cream cheese, Feta, goats cheese, Lancashire, Mozzarella, Quark, ricotta, Roquefort, Stilton).
